

I. What most commonly causes damage to the rear corners of a Forklift? (multiple choice)

- Turning the forklift sharply, ignoring the space around.
- Driving an electric forklift to a cramped charging station.
- Forklifts hitting each other in a work situation.

II. How do you ride a counterbalance truck on the ramp? (multiple choice)

- When loaded, always load uphill.
- At a calm speed.
- You can turn on the ramp.
- You can drive transversely.
- Try to tilt the mast inward.
- Without load, you can drive the forks downhill, as long as you make sure that the forks don't stick anywhere.

III. Which picture shows the right way to drive a forklift?

IV. How do you cross the threshold with a forklift?

- Direct reversing, eliminating the risk of goods falling in front of the forklift.
- Fast forward driving so that the forklift does not get stuck on the threshold.
- The threshold is exceeded at an angle of about 45°, which keeps the load on the spikes of the safest forklifts.

V. When you're riding a counterbalance truck empty downhill, can you drive with your forks facing forward?

YES / NO
